No. 32.—Monthly Production Statistics—New South Wales.

Quantities of Certain Articles Manufactured and Mined.

The following statistics of production are obtained principally by means of returns collected monthly from producers by the Government Statistician of N.S.W. in conjunction with the Commonwealth Statistician. Annual totals for 1953-54 and earlier years are derived principally from annual factory returns (relating in most instances to the year ended 30th June) collected by the Government Statistician.

Figures since July, 1954, are subject to revision.

No. 86.—Stock Exchange Index (Sydney).

The following index of the values of the principal Company shares on Sydney Stock Exchange embraces the ordinary shares of companies (excluding banking companies) whose business is conducted wholly or largely in New South Wales.

The prices of individual shares are unweighted, and each group average is the mean of the average monthly prices per £1 of paid-up capital. The aggregate index is the average of all the shares included in the groups with the addition of 24 miscellaneous shares. There is no base period as the index represents the ratio per cent. of the average prices of ordinary shares to their par values, adjustment being made where capital is written off or bonus shares are issued.

In Tables 88 and 91, the group “Sydney and Suburbs” differs from the Statistical Metropolis because it includes particulars for the whole of the Municipality of Liverpool and the whole of the Shires of Baulkham Hills, Blacktown and Hornsby.

No. 93.—Employment in New South Wales—Wage and Salary Earners in Civil Employment, Governmental and Private.

(1) Particulars in Tables 92 and 93 are estimates based on the Census of 1933 and subsequent quasi-censuses (e.g., Civilian Register, 1943, and Occupation Survey, 1945), and returns supplied monthly by governmental authorities, and since July, 1941, by employers for purposes of Commonwealth Pay-roll Tax.

(2) The number of employees recorded on Pay-roll Tax returns relates to those whose names appeared on the last pay-roll of the month irrespective of whether they were actually working at the end of the month.

(3) Working proprietors, wage earners in rural industry, females in private domestic service, members of full-time defence forces at home or abroad, National Service Trainees in camp, and Government "relief" workers are not included.

No. 94.—Employment in Larger Private Factories, New South Wales.

In order to provide a prompt indication of the trend of employment in private factories, a survey of employment in 628 larger privately-owned factories in New South Wales is made each month, by joint arrangement between the Secretary of the Department of Labour and National Service and the Acting Commonwealth Statistician. Approximately half of total factory employment is covered by the collection, the results of which are available one month earlier than the particulars of total factory employment shown in Table 92.

No. 97.—Export Price Index-Numbers—Australia.

(Compiled by the Commonwealth Statistician.)

These index-numbers are compiled from the prices of 20 commodities which normally constitute about 80 per cent. of all exports. For some metals, and for wheat (from July, 1945, to September, 1951), the index of prices is deduced from the average value of current sales or shipments and hence shows some irregularity. In this index the prices of the commodities are weighted by the average annual exports (production in the case of gold) during the three years, 1933-34 to 1935-36.

(Base of each section: Average of 3 years ended June, 1939 = 100.)

(h) Preliminary.

No. 98.—Wholesale Price (Basic Materials and Foodstuffs) Index-Numbers.

(Compiled by the Commonwealth Statistician.)

The eighty commodities included in this index are priced in their primary or basic form wherever possible. The prices used have, in the main, been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from locally produced building materials and one or two minor commodities however, the price movements may be taken as representative of variations in wholesale prices of basic materials in most Australian markets. The weighting system adopted is based on estimates of the average annual consumption of the commodities in Australia during the years 1928-29 to 1934-35 inclusive.

(Base: Average 3 years ended June, 1939 = 100.)
